

A Select Sprinklers System Saves You Time, Money & Water...

Select Sprinklers offers professional sprinkler services to the greater-Burlington, Waterdown, Milton and Oakville areas...

A lush, green lawn will go a long way to making your landscape the envy of your neighborhood. But if you don't want to spend hours every day hand-watering, or dragging hoses and sprinklers around your yard to get this beautiful result – then you may want to know more about how an automatic sprinkler system can give you back leisure time this summer, and for all summers to come.

Harry Hutten, president of **Select Sprinklers** in Burlington, says his company was born when he couldn't find a professional sprinkler contractor in the Burlington area. So, in the early '90's – with the help of an acquaintance who was experienced in sprinklers – Harry opened **Select Sprinklers...** and he and his team have been serving a satisfied and growing list of clients in an efficient, professional manner ever since.

No two properties will ever be exactly the same...

"When it comes to choosing which sprinkler system is best for a client," Hutten is adamant – "Sprinkler contractors simply have got to recognize and accept that every property will be different... different challenges, different conditions, different objectives, and different needs."

To that end, a trained **Select Sprinklers** professional always assesses each new property – **before** any work is begun – to ensure they install the right sprinkler system configuration, specifically to deal with the unique requirements of that property.

Not only does installing a sprinkler system save the time and hassle...

"An automatic sprinkler system not only saves you the time and hassles of having to hand-water or drag hoses around your yard, but it can also save you water and money," adds Hutten.

"**Select Sprinklers** is using a new smart controller from **Rain Bird®** Corporation (sprinkler system manufacturers) which, unlike traditional controllers, isn't simply a time-based, clock-type controller. Their revolutionary, industry leading & standard-setting **ESP-SMT** 'Smart' Controllers are actually weather-based, so they'll only come on when the controller senses the weather conditions deem it necessary to water.

More than just throwing water around...

While many people may think **Select Sprinklers** is just in the 'water throwing business,' Hutten's quick to clear up that misconception. He says "We don't just 'throw water around,' rather we'll assess at your landscape (slopes, shaded areas, gardens, heavily sloped areas, etc.), listen to your particular needs, and only then design a system that's going to service your property particularly well."

If you're interested in having **Select Sprinklers** assess your property for a sprinkler system...

Be sure to call them TODAY at 905.689.8358.

One of their fully trained professionals will arrange a no-obligation appointment with you.
